

**UNIQUE MEDIA**

Video Screens GmbH

UM Video Screens GmbH was established in 2010, Vienna, Austria by a young and dynamic team that aims to bring and integrate new technological developments to the European market.

UM Mission: “To provide a higher level of performance, visibility and attractiveness by rent and sale of its products.”

The company’s main products are LED 360 displays, Holograms and 3D Mapping

The company offers screens with different picture quality: the screens vary from 4mm pixel pitch to 10mm.

For rent, UM offers two types of displays with pixel pitch 7.62 and 6.

Unique Media is changing the face of the old Hologram technique by applying it in a variety of ways.

In a smaller area we provide a hologram projection of 3D images on a transparent screen which creates illusion of a floating image in space. The size of the hologram can be customized upon request.

The Hologram is a projection based technology, in which the video is projected on a solid, transparent plastic surface in various sizes.

The result is a magnificent 3D reflection that floats in mid-air, combined with a live performing actor, it creates an amazing effect mixing reality and fantasy.

The Pyramid is an innovative product developed by our partner AVS.

This technology allows a video hologram with a 360° viewing range.

The pyramid is provided in various sizes according to your needs, It is the perfect solution for branding and promotional purposes in product launches and exhibitions.

A unique technology enables us to project images and movies directly on water, according to the event concept.

Projection on water requires the preparation of genuine, suitable materials. Screens are available in various sizes and can be used both indoor and outdoors.

3D Mapping is used to project on different surfaces such as: buildings, walls, cars, and other indoor/outdoor objects.

3D Mapping projection is where video art and technology meet, nature and man-made monuments come together to create an inspiring experience. Projected visuals are designed according to the concept of the event and the projection surface.

Our products increase the visibility and attractiveness of the product or images displayed as well as the attention and awareness of the audience.

## Our products provide an excellent platform for:

- Advertisements
- Promotions
